

Innovive — HubSpot & Marketing Operations Plan

Prepared by Volado Labs

4 August 2026

1. What we found

We audited your HubSpot portal directly on 4 August. These figures are read from the live account, not estimated.

Contacts in HubSpot	142
Created by a form on your website	140
Contacts with an owner assigned	0
Contacts moved past the "Lead" stage	0
Follow-up activity ever recorded	None
Where they came from	101 direct, 38 organic search , 2 offline, 1 referral

The root cause

One form on your website is doing four different jobs. Sales enquiries, customer service requests, job applications, and general questions all submit through the same Contact Us form, all land in the same shared inbox, and all get written into HubSpot as a new "Lead".

On 4 August your site received six submissions. One was a job application, one was a genuine sales enquiry, and **four were existing customers reporting equipment problems**. All six were recorded identically.

What that means for your numbers

The 142 figure is a count of form submissions, not leads. Once service requests and job applications are separated out, genuine new-business enquiries are running closer to **5 to 10 per month**.

That is a smaller number, and it is the honest one. We would rather give you a figure that holds up in a board meeting than a larger one that does not.

The good news: the enquiries you are getting are exactly the right ones. Recent examples include the NIH, Battelle, the Pasteur Institute, Charles River, Zoetis, Sarepta Therapeutics, Penn State College of Medicine, the University of Michigan, and Children's Hospital of Philadelphia. The demand is real and well qualified. The gap is entirely in what happens after the form is submitted.

2. What you have asked for

1. A board-ready view of marketing performance for the October meeting.
2. Attribution: if marketing spend goes into a channel, what comes out of it.
3. Knowing how enquiries found Innovive, including a "How did you hear about us?" question.
4. One source of truth rather than data spread across several tools.
5. All of it **without changing how the sales team works**.

That last point shapes everything below. Sales opportunities and accounts stay in NetSuite. HubSpot handles marketing only.

3. What we recommend

3.1 Separate customer service from sales enquiries

A dedicated customer support form, with its own visible entry point on the website, routed to your customer service team. Sales enquiries route to Sarah.

This is the highest-value change on the list. It gives your customers an obvious place to go for help, takes service traffic out of the sales queue, and makes every number that follows trustworthy.

3.2 Identify existing customers automatically

We import your NetSuite customer list into HubSpot as **non-marketing contacts**, which are unlimited and carry no cost. From then on, any enquiry from a known customer is instantly recognisable as an existing relationship rather than a new lead, without anyone having to read and classify it.

We need a CSV export from your side to do this.

3.3 Give every enquiry an owner

Today nothing is assigned to anyone. Each form will route to a named owner, so nothing sits unattended and it is always clear who is responsible.

3.4 Capture where enquiries come from

Two sources, working together.

HubSpot already records this automatically. Its tracking code captures the original source of every contact, which is how we know that 38 of your current contacts arrived through organic search. That is working today and needs no additional software.

We add the "How did you hear about us?" question you asked for, covering Google,

LinkedIn, Instagram, X, trade shows and events, referrals, and distributors. This captures what the tracking code cannot see, such as a conversation at a trade show or a recommendation from a colleague.

Google Analytics and Search Console data is then combined with your HubSpot data in the reporting dashboard, rather than pushed into HubSpot itself. That is both the more capable option and the one that avoids an unnecessary subscription upgrade, since HubSpot's Search Console integration is only available on a tier well above the one you need.

3.5 Record what happened

Each qualified enquiry gets an outcome recorded against it monthly, checked against NetSuite. This is what turns activity reporting into ROI reporting, and it requires no change to how the sales team works.

4. How HubSpot will be structured

4.1 Forms

Form	Purpose	Routes to
Sales / Product Enquiry	New business, quotes, product information	Sarah Anderson, copy to info@
Customer Support (<i>new</i>)	Repairs, replacements, technical questions	Customer service
InnoPlus Enquiry (<i>exists</i>)	InnoPlus service line	innoplus@
Job Application (<i>exists</i>)	Careers	hr@
Event Capture (<i>later</i>)	Trade show and event contacts	Marketing

The sales form will also carry a short "What is your enquiry about?" question, so that anything arriving on the wrong form is still classified correctly.

4.2 Lifecycle stages

A deliberately short list, because sales activity stays in NetSuite.

Stage	Meaning
Lead	Submitted a sales enquiry, not yet assessed
Marketing Qualified Lead	Fits your ideal customer profile and shows real interest
Sales Qualified Lead	Handed to sales. This is marketing's primary measure.
Customer	A known NetSuite customer
Other	Service contacts, job applicants, vendors

No deal pipeline is built in HubSpot. It would sit empty and mislead you.

4.3 Information captured on every contact

- How did you hear about us
- Type of enquiry (purchase, quote, product information, technical support, repair, careers)
- Institution type (academic, CRO, pharma or biotech, government or national lab, hospital)
- Trade show or event source
- Whether they are an existing NetSuite customer
- **Outcome** (became a customer, already a customer, lost, no response)

4.4 Segmentation

Prospects and customers are kept strictly separate, as you asked. Lists by institution type and by trade show allow targeted follow-up rather than one message to everybody.

5. Your subscription: no upgrade required

You are on the Starter Customer Platform at roughly \$45 per month across three seats, including 1,000 marketing contacts.

We are not recommending an upgrade. The next tier up is around \$890 per month, and it buys automation and lead scoring that solve a volume problem you do not currently have. At 5 to 10 genuine enquiries a month, the work is comfortably handled directly, and we will do it as part of your existing retainer.

The number worth watching is marketing contacts, not features. You are at roughly 140 of your 1,000. Trade show lists are what will move that figure, since contacts you intend to email must be marketing contacts. With ten or more shows a year, the allowance is likely to become the binding constraint within about twelve months.

When that happens, the answer is to buy an additional block of contacts, which is a small incremental cost, not to move up a tier. We will flag it well in advance.

Some HubSpot features do sit above your tier, including workflow automation, lead scoring, and the built-in Google Search Console integration. None of them are necessary here. Automation and scoring solve a volume problem you do not have, and search data is better combined in your reporting dashboard than inside HubSpot. We have designed the plan so that nothing in it depends on an upgrade.

One seat can be freed immediately, since Maddison no longer needs day-to-day access.

6. Email: keep Klaviyo

There is no native integration between Klaviyo and HubSpot, and we do not recommend building one at this stage.

Your Klaviyo list is around 5,000 customers, which exceeds the 1,000 marketing contact allowance in HubSpot on its own. Moving it would trigger a significant cost for no benefit, and

would work against your requirement to keep customers and prospects separate.

Recommendation: HubSpot owns prospects and new marketing. Klaviyo continues to own customer communications. We will revisit only if it ever becomes cheaper to consolidate.

7. Answering "did marketing generate revenue?"

There are two versions of this, and we want to be straightforward about both.

Deliverable for October, with no dependencies. Each month we export that month's qualified enquiries, check them against NetSuite for closed business, and record the outcome in HubSpot. At current volumes this takes under an hour. It requires nothing from the sales team and no integration work.

A better version, if it proves feasible. A one-way, read-only connection from NetSuite to HubSpot that records closed business automatically. This depends on your IT team confirming it will not disturb the NetSuite automation work already in progress.

We are planning around the first and treating the second as an improvement, so the October deliverable does not depend on it.

8. Reporting

Monthly: enquiries by type, genuine leads, sources, qualified handoffs, outcomes, and trade show contribution.

Quarterly, for the board: leads by channel, cost per lead once paid advertising begins, qualified handoffs, outcomes, and recommendations.

A note on the existing Looker Studio dashboard: it has not been updated since the end of April, its Supermetrics connections have expired, and its HubSpot section is drawing from the old Wix site rather than from HubSpot. We recommend rebuilding reporting on a single dashboard fed directly from HubSpot, Google Analytics, Search Console, and your social accounts. That gives you the single source of truth you asked for, and removes at least one subscription from the stack.

9. Timeline to the October board meeting

Phase	Timing	What happens
1. Separate the funnels	Week of 4 August	Support form live, routing in place, visible support link on the site
2. Identify customers	11–15 August	NetSuite customer list imported

Phase	Timing	What happens
3. Structure the data	18–29 August	Stages, properties, owners, routing
4. Turn on attribution	25 Aug – 5 Sept	"How did you hear about us?" live, source tracking verified, analytics joined in the dashboard
5. Trade show programme	From the August show	Pre-show outreach, capture process, follow-up
6. Advertising readiness	Early September	Tracking verified before spend begins
7. Reporting	Late September	Monthly format agreed, board pack assembled

Phase 1 is first because until service and sales are separated, every figure the system produces is unreliable.

10. What we need from you

Each item below sits on the critical path.

#	What we need	Who	Needed for
1	Confirm who receives customer service requests, and the exact address	Robin / Victoria	Phase 1
2	Confirm info@ or orders@ for sales enquiries	Victoria	Phase 1
3	NetSuite customer export (name, email, company, account ID)	Rahsaan / Victoria	Phase 2
4	Approve the lifecycle stages in section 4.2	Robin	Phase 3
5	Confirm seat allocation once Maddison's seat is freed	Robin	Phase 3
6	Decide the job application résumé field: file upload, or paste as text	Robin / HR	Careers form
7	Name someone per trade show responsible for getting the attendee	Robin	Phase 5

#	What we need	Who	Needed for
	list to marketing		
8	Confirm whether Sarah will accept enquiries in HubSpot, or prefers handoff by email	Robin	Phase 3

Item 3 is the one that unlocks the most. Everything else can proceed in parallel.

11. Cost

All of the above is included in your existing retainer. There is no additional charge for the implementation, the configuration, the reporting, or the ongoing management.

An implementation of this scope would normally be quoted as a project in its own right. We are including it because without it, neither of us can demonstrate what your marketing is actually producing, and that measurement is the foundation everything else depends on.

The only costs that could arise are HubSpot's own, and as set out in section 5, none are needed now.

12. Already completed

- **Job applications were being filed under the Contact Us form and routed to info@ rather than HR.** This has been corrected, and applicants can now attach a résumé. Subject to your decision on item 6 above.
- Full audit of the HubSpot portal, contact provenance, and form configuration.
- Verification that all 140 contacts originate from website forms, with no imported or purchased data.
