

Innovive Klaviyo Audit

The account is not broken. It is unbuilt, and it is sending from an address that fails the domain's own DMARC policy.

Account **Innovive (RcTRJX)** Audited **4 September 2026** Access **read-only API key** By **Collin Wood**

MAIN LIST 4,985 Innovive Customer Contacts	AUTOMATION 0 flows Every send is manual	BOUNCE RATE, LAST FULL SEND 2.75% Klaviyo's ceiling is 2%	DAYS SINCE LAST SEND 52 14 July 2026
---	--	--	---

01 Start here

One finding outranks everything else in this document.

FIX FIRST Klaviyo mail from `marketing@innovive.com` fails DMARC alignment

`innovive.com` publishes `v=DMARC1; p=quarantine`. A quarantine policy instructs receiving mail servers to put unaligned mail in the spam folder. For mail to align, either SPF or DKIM must authenticate against `innovive.com` itself.

Neither does. There is **no Klaviyo DKIM record** on the domain: `k1._domainkey` and `k12._domainkey` are both absent, and the only DKIM selectors present are `selector1` (legacy Microsoft 365) and `google`. There is no Klaviyo branded sending subdomain. And the SPF record covers Google, NetSuite, Amazon SES and BrightMove, but not Klaviyo:

```
v=spf1 include:_spf.google.com include:mailsenders.netsuite.com include:amazonses.com
include:_spf.brightmove.com ~all
```

So Klaviyo is sending on shared infrastructure, signing with its own domain, under a From address whose domain tells receivers to quarantine exactly that. Every campaign in this account has gone out that way.

Do not increase sending volume until this is fixed. Authenticating the domain in Klaviyo is a settings change plus three DNS records, and it is the single highest-value hour available on this account.

FIX FIRST A GCC send is being prepared on top of it

A list named **MENA** (51 profiles) was created on 28 August 2026, two days after the GCC LinkedIn campaign launched, and there is a matching draft campaign, *Attentive and Innovive_MENA*, plus a MENA template dated the same day. A new audience, in a new region, on unauthenticated sending, is the worst possible first impression: cold recipients who land in spam never recover.

02 The evidence in the numbers

Deliverability problems show up as bounces and decaying opens before they show up as complaints. Both are present.

All campaigns sent in the last 12 months, from Klaviyo's campaign values report. Rows shaded where the bounce rate exceeds 2%. Small sends are internal or sales-reviewed sublists.

SENT	CAMPAIGN	RECIPIENTS	BOUNCE	OPEN	CLICK	UNSUB	SPAM
2026-07-14	InnoTransit Mouse Transport Cart Prod Launch	4,732	2.75%	23.25%	5.32%	0.13%	0.00%

2025-10-30	AALAS 2025 Meet Us In Long Beach w/GIF	4,847	8.87%	32.17%	4.10%	0.45%	0.04%
2025-09-25	AALAS 2025 Customer Event Invite	403	6.45%	49.34%	17.51%	0.00%	0.00%

What the numbers do and don't say

Spam complaints are effectively zero and unsubscribes sit between 0.1% and 0.45%. Nobody is angry. That rules out a content problem and leaves list decay and authentication, which is what the bounce column shows.

The clean sublists prove the point from the other side. When Innovive sent to 306 engaged survey respondents, the bounce rate was 0.98% and the open rate 84.8%. The same account, the same sender, the same infrastructure. The difference is who is on the list.

03 What isn't there

The account has been used as a send tool, never built as a program. Four capabilities that would normally exist are entirely absent.

0 Flows No welcome, no re-engagement, no post-purchase. Every message in the account's four-year history was sent by hand.	0 Live segments Five segments were built for past campaigns and then deleted. Nothing persists, so every send re-creates its own audience.
0 Signup forms Nothing on innovive.com collects an email address into Klaviyo. The list cannot grow except by manual upload.	0 Revenue attribution No ecommerce integration and no Placed Order metric. Klaviyo cannot connect a single dollar to a single email.

The onsite script is missing too

The account holds Viewed Product and Active on Site metrics, which implies Klaviyo's browser tracking was once installed, almost certainly on the old Wix site. It is not on the current innovive.com: the served HTML contains no reference to static.klaviyo.com or the public key RcTRJX . Those two metrics are dead history.

04 The list problem

22 lists holding 9,060 memberships, against roughly 5,000 real people. Almost all of it is one-off uploads that were never folded back in.

Every list in the account, by profile count. Memberships overlap heavily, so the total is not a headcount.			
PROFILES	CREATED	LIST	READING
4,985	2022-02-10	Innovive Customer Contacts	The real audience. Everything else is a fragment.
906	2026-03-03	eCommerce Survey Respondent List (US)	Survey cohort, now static
833	2023-07-19	List of MA and ME Customers Only	Geography, should be a segment
627	2023-02-10	Innovive+ Potential Customer Contact List MA Only	Prospects mixed into a customer tool
352	2025-09-25	Innovive Cust Contacts AALAS 2025 Invite List	Event cohort
239	2026-04-30	Rat Bottom Pallet Quantity Customer List	Single-notice audience
206	2022-02-10	Innovive Employees	Internal, must be excluded from marketing metrics
162	2023-02-15	Innovive+ Potential Customer Contact List San Francisco	Prospects
158	2025-12-19	Innovive Gift Baskets Customer Contacts, US Only	Seasonal one-off
138	2024-11-14	AALAS 2024 Innovive Booth Attendees	Two-year-old event leads, never nurtured
118	2025-06-06	FELASA 2025 Innovive Booth Attendees (Leads)	Event leads, never nurtured
108	2023-02-22	Innovive+ Potential Customer Contacts San Diego	Prospects
101	2025-04-25	Inno+ Boston Happy Hour Invitees	Event one-off
51	2026-08-28	MENA	New. Send pending on unauthenticated domain.
31	2025-06-27	Disposable Water Bottle For Competitors Customer Contacts	One-off
26	2025-09-22	AALAS 2025 Innovive Team Attendees	Internal
12	2025-12-22	Innovive Gift Baskets Customer Contacts, US Only (LR)	One-off

PROFILES	CREATED	LIST	READING
5	2025-10-30	NetSuite SB1 Innovive Customer Contacts Test List	Abandoned integration test, delete
1	2022-02-02	Preview List	Klaviyo default, never removed
1	2022-02-02	Newsletter	Klaviyo default, never used
0	2025-11-04	SMS List	Empty. SMS was set up and abandoned.
0	2024-12-05	Innocycle Customer Contacts	Empty. Created for a program that never mailed.

Why this matters beyond tidiness

A list-per-upload structure means suppression and engagement history live in twenty-two places. You cannot ask "who has opened nothing in a year" and act on the answer, which is the single query that fixes the bounce problem. It also means the customer-versus-prospect separation Robin insists on is enforced by naming convention rather than by structure, and the Inno+ prospect lists are already sitting inside the customer account.

05 Everything else worth knowing

REPORTING The account timezone is US/Eastern

Innovive operates from 10019 Waples Ct, San Diego. Klaviyo is set to Eastern, so every send time, daily rollup and engagement window in this account is displaced three hours from the business. It also silently disagrees with the GA4 property and the dashboard.

CADENCE Sending has declined every year since 2023

28 campaigns in 2023, 19 in 2024, 15 in 2025, and 9 through July 2026. Nothing has gone out in 52 days. Fifteen drafts sit unsent, several clearly abandoned mid-build, including two AALAS 2025 variants and one titled simply *Email 1*.
The content that does go out is almost entirely operational: product change notices, ECO announcements, holiday hours. That is a customer-service channel wearing a marketing tool, which is worth naming before anyone sets a growth target for it.

HOUSEKEEPING Eight of 18 templates are Klaviyo's factory boilerplate

Newsletter #1 through *Newsletter #8* were created on 2 February 2022, the day the account was set up, and have never been touched. They add noise to every template picker. The account's own `website_url` is also recorded as `http://innovive.com`, which now 301-redirects to HTTPS.

06 What to do, in order

The sequence matters. Cleaning a list before you fix authentication wastes the cleaning; sending before either wastes the domain.

1 Authenticate the sending domain in Klaviyo

Settings, then Domains, then add a branded sending domain and publish the three CNAMEs it issues. Confirm `kl._domainkey.innovive.com` resolves afterwards. Hold the MENA send until it does.

OWNER: VOLADO, WITH DNS ACCESS · BEFORE ANY FURTHER SENDING

2 Suppress the hard bounces and the year-long non-openers

Klaviyo already holds the bounce history. Suppressing it and profiling out addresses with no open in twelve months should take the main list from 4,985 to something smaller and materially healthier. Expect the open rate to rise on the next send purely from removing dead weight.

OWNER: VOLADO · SAME WEEK

3 Consolidate 22 lists into one list plus segments

One master customer list, with geography, event attendance and product interest expressed as segments rather than as separate uploads. Delete the two Klaviyo defaults, the NetSuite test list and the two empty lists outright.

OWNER: VOLADO · WITHIN TWO WEEKS

4 Put a signup form and the onsite script on innovive.com

Gate it behind CookieYes the way GA4 and the HubSpot tracker already are. Without this the list can only ever shrink.

OWNER: VOLADO · COORDINATE WITH THE WORDPRESS SNIPPETS

5 Build one flow before building five

A welcome or new-customer sequence is the highest-value first automation for this audience. Prove the pattern, then extend.

OWNER: VOLADO · AFTER THE LIST WORK LANDS

6 Settle the Klaviyo and HubSpot boundary in writing

The agreed direction is Klaviyo for customers, HubSpot for prospects, kept separate at Robin's insistence. Three Inno+ prospect lists already sit in Klaviyo, so the rule is being broken in practice. Decide where event leads land before AALAS 2026.

OWNER: COLLIN WITH ROBIN AND VICTORIA · BEFORE THE OCTOBER BOARD MEETING

07 Method and limits

Read against the Klaviyo API (revision 2024-10-15) on 4 September 2026 using Innovive's read-only private key, plus public DNS lookups for `innovive.com` and a fetch of the live site's served HTML. Campaign statistics come from Klaviyo's own campaign values report over the last twelve months, not from a recomputation.

What this audit does not cover

- **Klaviyo's own sending-domain screen.** The DNS evidence is conclusive that no Klaviyo DKIM is published, but the UI is the authoritative place to confirm the domain's configured state, and a read-only key cannot see it.
- **Profile-level consent records.** Where each of the 4,985 profiles came from, and whether consent was captured, was not audited. It matters for the MENA send in particular, since GDPR-equivalent regimes apply in several GCC states.
- **SMS.** The SMS list is empty and no text campaigns have been sent, so the channel was noted and not examined.
- **Webhooks.** The key returns 403 on that endpoint, the only permission it lacks.
